Shaping Animal Nutrition for a Competitive and Sustainable Future

Philippine Society of Animal Nutritionists Inc.

39th PHILSAN Annual Convention
October 6, 2026
Okada Manila, Parañaque City
Metro Manila, Philippines

www.philsan.org

MALACAÑAN PALACE
MANILA

MESSAGE

I extend my warmest greetings to the **Philippine Society of Animal Nutritionists (PHILSAN)** as you hold your **39th Annual Convention**.

The means by which we nurture and sustain animal life have implications that go far beyond the farm, eventually reaching aspects of sound nutrition that determine the productivity and resilience of the wider population. The PHILSAN strengthens every link in this chain by bringing together expertise from research, industry, and professional practice to advance the critical operations in the animal-raising industry. Indeed, your continuing work helps secure the foundations of a more competitive agricultural sector and a more food secure Philippines.

As animal production continues to evolve, this year's annual convention offers an opportune time to ensure that your objectives and pursuits remain aligned with our national development goals. Thus, I hope that the insights and discoveries during this assembly will translate new developments in animal nutrition into better outcomes for your industry, our economy, and the country.

Rest assured that this administration will work to create an environment where scientific advances, industry application, and productive enterprise can flourish for the benefit of our people, With you as our partners in the improvement of animal nutrition, we are assured of a more progressive and prosperous *Bagong Pilipinas*.

I wih you all an insightful and meaningful convention.

FERDINAND R. MARCOS JR.

MANILA
06 October 2026

MESSAGE

It is my pleasure to extend my warmest greetings to the Philippine Society of Animal Nutritionists (PHILSAN) as you celebrate your 39th Annual Convention with the theme, "Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future."

Animal nutrition is at the heart of a productive and sustainable livestock and poultry industry. As we work toward a more competitive animal industry, efficient resource utilization and continuous knowledge-sharing will remain essential in improving animal health and productivity while ensuring safe, quality and
affordable food for Filipino consumers.

The Department of Agriculture recognizes the important contributions of animal nutritionists, researchers, academe, industry partners, veterinarians, farmers,- and other stakeholders in advancing our livestock and poultry sectors. Through strong collaboration between government and the private sector, we can address emerging challenges and build an industry that is more responsive to the needs of our people.

May this convention continue to serve as a platform for meaningful exchange and partnerships that will help shape the future of animal nutrition and Philippine agriculture. Congratulations to PHILSAN, and my best wishes for a successful and productive 39th Annual Convention.

Mabuhay ang PHILSAN, at mabuhay ang ating animal nutritionists and livestock and poultry industry!

Constante J. Palabrica, DVM
Undersecretary for Livestock
Department of Agriculture, Philippines

MESSAGE

Warmest greetings to the Philippine Society of Animal Nutritionists (PHILSAN) as you gather for your 39th Annual Convention.

This year's Theme, "Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future," strongly resonates with the Department of Agriculture's mandate to ensure food security and elevate the livelihoods of our local farmers. The livestock sector remains a vital pillar of Philippine Agriculture, and its continued resilience relies heavily on the advancements driven by science, innovation, and industry collaboration. Your collective expertise as animal nutritionists, veterinarians, researchers and producers is the true engine fueling progress within our livestock sector. Navigating the complex challenges of our modern agricultural landscape demands innovative, science-based solutions that enhance production efficiency, safeguard animal health, and promote environmental sustainability.

I highly commend PHILSAN for serving as a vital link of collaboration, where dedicated industry leaders can unite to drive these essential advancements and shape a more resilient future for our nation.

The Office of the Assistant Secretary for Swine and Poultry stands firmly with you in these endeavors. We look forward to continuing our fruitful partnership to build a more competitive, resilient, and vibrant agricultural future for the benefit of all Filipinos.

Congratulations on a momentous 39th Annual Convention, and I wish you all a successful and inspiring gathering.

Mabuhay ang PHILSAN!

MICHAEL DE JOYA GARCIA
Assistant Secretary for Swine and Poultry

MESSAGE

To our distinguished guests; officials and members of the Philippine Society of Animal Nutritionists or PHILSAN, composing of academicians, private companies, consultants, researchers and development workers; stakeholders and industry partners; my fellow public servants; and all participants, magandang umaga po sa ating lahat!

It is my great pleasure and honor to join you today as PHILSAN holds its 39th Annual Convention.

Allow me to congratulate the organization for its continued dedication in advancing animal nutrition and contributing to the development of the Philippine animal industry.

This year's theme "Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future," is timely and relevant.

Animal nutrition plays a significant role in ensuring the health, productivity, and efficiency of our livestock and poultry, ultimately contributing to food security and sustainable livelihoods for Filipino farmers and producers. The livestock and poultry sector remain an important part of Philippine agriculture. However, challenges such as animal diseases, production disruptions, and rising production costs continue to affect the industry's growth and competitiveness.

In addressing these challenges, science-based animal nutrition, improved feed efficiency, research, and innovation will play an increasingly important role. We must continue translating knowledge and new technologies into practical and accessible solutions for our farmers and producers.

At the Department of Agriculture and the Bureau of Animal Industry, we remain committed to supporting programs that strengthen animal health, improve production systems, and enhance the capacity and competitiveness of our stakeholders. However, the government cannot do these alone. The continuing progress of the animal industry requires stronger collaboration among government, the private sector, academe, researchers, professional organizations, and our farmers.

Through science, innovation, and stronger partnerships, we can build a more productive animal industry that contributes to food security and better opportunities for every Filipino. Once again, congratulations to PHILSAN on its 39th Annual Convention.

May this gathering inspire meaningful discussions, stronger partnerships, and innovative solutions for the future of animal nutrition and the Philippine animal industry.

Sama-sama nating isulong ang isang mas matatag, mas masagana, at mas makabagong sektor ng paghahayupan tungo sa isang Bagong Pilipinas.

Mabuhay ang Bagong Pilipinas!

Christian P. Dandigan, DVM
Officer-in-Charge - Director
Bureau of Animal Industry

NAFDP
National Animal Feed Development Program
nourishing growth, ensuring the future

MESSAGE

Warmest greetings to the officers, members, partners, and participants of the Philippine Society of Animal Nutritionists (PHILSAN) on the occasion of your 39th Annual Convention.

This year's theme, **"Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future,"** captures the vital role of animal nutrition in building a stronger, more resilient, and competitive livestock industry.

As our industry continues to face challenges brought about by rising feed costs, climate change, emerging diseases, and changing production and consumer needs, science and innovation must fuel our progress. This is where the expertise of animal nutritionists becomes indispensable. Through research, data, and evidence-based practices, you help transform challenges into opportunities and develop practical solutions that can improve the productivity and profitability of our farmers and producers.

Recognizing the importance of a reliable and sustainable feed supply, the Bureau of Animal Industry has recently established the National Animal Feed Development Program. As a new program, one of its initial and important undertakings is the generation of baseline data on the availability, distribution, and characteristics of feed resources across the country.

This baseline information will provide a clearer picture of the feed resources available to our livestock sector and will serve as an important foundation for evidence-based planning, research, policy development, and future feed development initiatives. By knowing what resources are available, where they are found, and how they can potentially be utilized, we can better identify opportunities to improve feed availability, reduce production costs, and strengthen the resilience of our livestock industry.

This is an area where the expertise and partnership of animal nutritionists are particularly valuable. The data we generate must not simply remain as statistics or inventories. It should help us understand the opportunities and constraints in our feed sector and guide the development of appropriate technologies, feeding strategies, and interventions that respond to the actual needs of our farmers and producers.

However, our work does not stop with data generation. Progress is strongest when knowledge is shared and translated into action.This is why partnerships with organizations such as PHILSAN are important. By bringing together animal nutritionists, veterinarians, researchers, academe, government, industry, feed manufacturers, and farmers, we can build a stronger knowledge base and develop solutions that are scientifically sound, practical, accessible, and responsive to the needs of the industry.

Congratulations to PHILSAN on its 39th Annual Convention. May this gathering inspire stronger partnerships, meaningful discussions, and new ideas that will continue to fuel progress through science, shape the future through innovation, and create lasting benefits for our farmers, our livestock and poultry industry, and our nation.

MESSAGE

I am pleased to begin by extending the warm support of the University of the Philippines Los Baños (UPLB), College of Agriculture and Food Science (CAFS), to everyone gathered for the 39th Philippine Society of Animal Nutritionists (PHILSAN) Annual Convention.

The theme "Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future," reflects the advocacies of every higher education institution offering academic programs in agriculture. Embedded in these programs, and in every course under them are sustainability principles that ensure a balance between food security and environmental protection. As animal nutritionists, we always ensure that in any feed formulations and farm management systems that we develop and implement, it considers both production efficiency and environmental stewardship. These are essential foundations for building a sustainable and regenerative animal agriculture sector in the Philippines over the next fifty years.

There are clear challenges that we must face. We need animals that grow efficiently, systems that use less resources, and solutions that remain accessible to ordinary Filipino producers. No single university or professional organization can find solutions to these challenges alone. The more researchers and industry practitioners sit together, the greater the chance of finding meaningful answers.

On behalf of UPLB-CAFS, I congratulate PHILSAN for consistently creating avenues where academe, research, and industry can come together. May this convention spark fresh collaborations and renewed energy for the challenges ahead. Our College remains open to partnerships that transform good ideas into lasting progress.

May the conversations you have here fuel real and sustainable progress for Philippine agriculture.

Amado A. Angeles, PhD
Dean, College of Agriculture and Food Science

MESSAGE

The UPLB Institute of Animal Science (IAS) warmly congratulates the Philippine Society of Animal Nutritionists, Inc. (PHILSAN) on its 39th Annual Convention, with the theme, **"Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future."**

IAS is proud of its longstanding partnership with PHILSAN and its contribution to the development of generations of animal scientists, nutritionists, researchers, and industry professionals. We remain committed to advancing excellence in education, research, and innovation for the continued growth and sustainability of Philippine animal agriculture.

May this convention foster meaningful collaboration, inspire innovation, and strengthen our shared commitment to a more competitive and sustainable animal industry.

Congratulations, PHILSAN! Mabuhay ang Philippine Animal Nutrition Community!

COLLEGE OF AGRICULTURE

MESSAGE

It is with great honor and pleasure that the College of Agriculture-Central Luzon State University extends its steadfast support to the Philippine Society of Animal Nutritionists (PHILSAN) on the occasion of its 39th Annual Convention.

Guided by the theme, "Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future," this year's gathering reflects a timely and compelling call to advance the science and practice of animal nutrition in support of a stronger, more competitive, and sustainable Philippine agricultural sector. Animal nutrition stands at the heart of a productive and resilient animal industry. Its advancement requires not only scientific excellence and technological innovation, but also the sustained commitment of professionals and institutions to knowledge generation and dissemination.

As an academic institution, we deeply value our partnership with PHILSAN and share its commitment to cultivating a culture of excellence in agricultural education and research. We recognize the vital role of professional organizations in complementing the work of academe and in creating meaningful avenues for knowledge exchange, professional development, and collaboration.

On behalf of the College of Agriculture of Central Luzon State University, I extend our sincerest congratulations to the officers and members of PHILSAN, as well as to all participants, partners, and stakeholders who have made this significant gathering possible. May your 39th Annual Convention be a resounding success and another meaningful milestone in PHILSAN's continuing journey of service and excellence. Mabuhay ang PHILSAN. Mabuhay ang sektor ng Agrikultura ng Pilipinas.

Jayson J. Juan, PhD
Acting Dean
College of Agriculture, Central Luzon State University

COLLEGE OF AGRICULTURE

MESSAGE

Progress in animal agriculture begins with knowledge that reaches beyond the classroom and laboratory to improve practices on the farm. As the PHILSAN gathers for its 39th Annual Convention, we celebrate the exchange of ideas and the partnerships that help turn advances in animal nutrition into practical benefits for the industry and the communities it serves.

This year's theme, "Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future," reflects a shared responsibility among educators, researchers, and industry practitioners. Building that future requires scientific evidence and professionals prepared to apply it with competence, integrity, and an understanding of the challenges faced by Filipino farmers.

The Department of Animal Science, College of Agriculture, Central Luzon State University, values the opportunities PHILSAN provides for knowledge exchange and professional collaboration. Our participation in its activities has strengthened our connections with educators, researchers, and industry practitioners, enriching our work in instruction and research. We look forward to future endeavors and stronger research and innovation collaborations.

Congratulations to PHILSAN on its 39th Annual Convention. May this gathering inspire meaningful ideas and lasting partnerships for a more competitive and sustainable animal industry.

DR. VANESSA V. VELASCO
Department Chair
Department of Animal Science, College of Agriculture, Central Luzon State University

PHILIPPINE ASSOCIATION OF AGRICULTURISTS, INC.

MESSAGE

On behalf of the Philippine Association of Agriculturists (PAA), we extend our warmest greetings and support to the Philippine Association of Animal Nutritionists (PHILSAN) on the occasion of its 39th Annual Convention. We are truly honored to join you in this important gathering held for the benefit of agriculture professionals who are directly serving our farmers, producers, industry stakeholders, and the community.

Guided by the theme, "Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future," this convention reflects our shared resolve to advance the Philippine agriculture sector through science-based innovation, professional development, and meaningful collaborations.

Animal nutrition remains vital to building a transformative, resilient, and sustainable livestock and poultry sector which the PAA, as an Accredited Integrated Professional Organization (AIPO) for agriculture fully supports. As a professional organization that upholds human resource and professional development as one of our strategic pillars, the PAA firmly supports this convention that ultimately aims to provide professional development for our fellow members through parallel and learning skills sessions. It is in this light that this convention is both timely and relevant for creating opportunities for knowledge exchange and networking among animal nutritionists, industry stakeholders, and policymakers to create more sustainable and effective strategies to sustain the animal industry.

May this gathering foster stronger partnerships that will help secure a more competitive future for the Philippine agriculture. We commend PHILSAN for its continued leadership and dedication to the advancement of animal nutrition and the agricultural profession.

We look forward to seeing how both our Associations can continue to support one another in our shared vision **towards a unified and stronger Philippine agriculture!**

Mabuhay!

MESSAGE

"PAFMI warmly congratulates PHILSAN on its 39th Annual Convention.

PHILSAN plays an important role in the feed milling industry by sharing knowledge and promoting proper animal nutrition. Its work helps feed manufacturers produce safe, quality, and nutritious feeds for the livestock and poultry industry.

We believe that the continued cooperation between PHILSAN and the feed milling industry will help us face new challenges, improve our practices, and support the growth of the industry.

PAFMI values its partnership with PHILSAN and looks forward to working together to further improve the Philippine feed and animal industry.

Congratulations, PHILSAN, and best wishes for a successful convention!"

MESSAGE

On behalf of the Philippine Veterinary Drug and Nutrition Association (PVDNA), I am honored to extend our full support to the 39th PHILSAN Annual Convention, with the theme "Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future."

PVDNA recognizes the vital role of the Philippine Society of Animal Nutritionists (PHILSAN) in advancing science, innovation, and responsible practices in animal nutrition. As partners in the animal health and nutrition sector, we share the commitment to strengthening our industry, supporting our farmers and producers, and contributing to a more productive, competitive, and sustainable Philippine livestock and poultry sector.

We believe that meaningful collaboration among professionals, industry stakeholders, academe, and government is essential in addressing the challenges and opportunities facing Philippine animal agriculture. Through the continued exchange of knowledge, technology, and best practices, we can help build a stronger and more resilient animal industry for the future.

PVDNA proudly supports the 39th PHILSAN Annual Convention and looks forward to strengthening our partnership with PHILSAN as we work together toward a healthier, more progressive, competitive, and sustainable Philippine animal industry.

Congratulations to PHILSAN on this significant milestone, and best wishes for a successful and meaningful convention.

MESSAGE

On behalf of the National Federation of Hog Farmers, Inc. (NATFED), I extend our warmest congratulations and full support to the Philippine Society of Animal Nutritionists (PHILSAN) on the occasion of its 39th Annual Convention.

This year's theme, "Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future," is both timely and relevant to the future of Philippine agriculture and livestock production.

PHILSAN has always been a valued partner of NATFED and of the Philippine swine industry. Your members play a vital role in advancing feed formulation, feed innovations, nutrition management, and feed competitiveness—all of which directly contribute to the productivity, efficiency, profitability, and sustainability of our farms.

As our industry continues to face challenges in production costs, feed prices, animal health, environmental sustainability, and global competition, the importance of science-based and innovative animal nutrition has never been greater. We believe that collaboration among nutritionists, farmers, veterinarians, feed manufacturers, government, and other industry stakeholders is essential in building a stronger and more resilient livestock sector.

NATFED looks forward to continuing our partnership with PHILSAN in promoting better nutrition, better productivity, and a more competitive and sustainable Philippine swine industry.

May this year's convention inspire new ideas, strengthen partnerships, and fuel meaningful progress for Philippine animal agriculture.

Congratulations, PHILSAN, and Mabuhay!

porkproducersfederation@gmail.com

MESSAGE

On behalf of the Pork Producers Federation of the Philippines, Inc. (ProPork), I warmly congratulate the Philippine Society of Animal Nutritionists (PHILSAN) on its 39th Annual Convention.

This year's theme, "Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future," is particularly meaningful to us in the pork industry. Good nutrition is at the heart of healthy animals, efficient production, and sustainable farms. At the same time, the realities faced by producers on the ground are important in shaping nutrition practices and solutions that are practical and responsive to their needs.

This is why the partnership between PHILSAN and ProPork is important. While we come from different parts of the industry, we share a common goal: helping pork producers raise healthier animals, improve productivity, manage production challenges, and build a stronger and more sustainable pork industry.

PHILSAN brings valuable expertise in animal nutrition, while ProPork provides a direct link to pork producers and the realities we face every day. By bringing these perspectives together, we can help ensure that knowledge, research, and innovation are translated into solutions that can make a meaningful difference at the farm level.

As the Philippine pork industry continues to recover and move toward a more sustainable and competitive future, ProPork looks forward to strengthening its partnership with PHILSAN. We believe that continued collaboration among nutritionists, producers, veterinarians, researchers, and other industry partners will be essential in addressing the challenges ahead and creating better opportunities for our farmers.

Again, congratulations to PHILSAN on its 39th Annual Convention! May this gathering further strengthen our partnership and inspire greater collaboration and innovation for the benefit of our producers and the Philippine pork industry.

Eric M. Harina
President
Pork Producers Federation of the Philippines Inc. (ProPork)

MESSAGE

This year, PHILSAN once again hosts its annual convention, and it couldn't be more timely.

The current middle east conflict has directed the spotlight on animal feed nutritionists as disruptions on the global supply chain, specifically raw materials, has caused the price of feeds to escalate not seen in decades. Add to this the looming effects of the 'El Niño' weather phenomenon which is expected to impact crop production early next year.

That said, we still are confident that your organization, as experts in the feed sector, and with your continuous research and guiding contributions, the poultry and livestock industry will be able to hurdle all these, just like before.

Congratulations once again to PHILSAN and all its members!

Jose Gerardo T. Feliciano
President
United Broilers Raisers Association

MESSAGE

Warmest greetings and congratulations to the **Philippine Society of Animal Nutritionists (PHILSAN)** on your 39th Annual Convention, with the theme **"Fuelling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future."**

On behalf of the **Philippine Egg Board Association (PEBA)**, I extend our full support to PHILSAN and its continued efforts to advance Philippine animal agriculture through science, innovation, and collaboration.

Animal nutrition is essential to a productive, competitive, and sustainable poultry industry. As we face rising production costs, changing market demands, and the need for greater food security, the knowledge and practical solutions shared through this convention are more important than ever.

May this gathering strengthen partnerships and inspire innovations that benefit our farmers, producers, and the entire agriculture sector.

Congratulations to PHILSAN and everyone behind this meaningful event. We wish you a successful and productive 39th Annual Convention.

PHILIPPINE COLLEGE OF SWINE PRACTITIONERS

(registered as PINOY PORCINE PRACTITIONERS, INC.)

MESSAGE

On behalf of the Philippine College of Swine Practitioners (PCSP), I extend our congratulations and strong support to the Philippine Society of Animal Nutritionists (PHILSAN) as it celebrates its 39th Annual Convention.

"Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future" is a timely call to action. In an industry where feed is one of the largest production costs, better nutrition is no longer simply about achieving good animal performance—it is about efficiency, resilience, and the ability of our producers to remain competitive.

For the swine industry, nutrition and animal health are inseparable. Feed quality, nutrient utilization, gut health, growth performance, and disease resilience ultimately come together at the farm level. Addressing these challenges requires nutritionists and veterinarians to work not in separate disciplines, but as partners in making sound and economically relevant production decisions.

PCSP strongly values its partnership with PHILSAN. We share the responsibility of translating science and professional expertise into practical solutions that improve farm performance and strengthen the Philippine livestock industry.

As we face rising costs, evolving disease challenges, and increasing demands for sustainable production, collaboration among our professional organizations has never been more important.

May this convention generate ideas that move beyond discussion—ideas that can be applied, measured, and translated into better outcomes for our animals, our producers, and our industry.

Congratulations to PHILSAN on its 39th Annual Convention. PCSP stands with you in shaping a stronger, more efficient, and more competitive Philippine animal industry.

Dr. Romulo L. Masilungan, FPCSP
President
Philippine College of Swine Practitioners

PHILIPPINE COLLEGE OF POULTRY PRACTITIONERS

MESSAGE

It is with great pleasure that I extend my warmest congratulations to the Philippine Society of Animal Nutritionists (PHILSAN) on the occasion of its 39th Annual Convention, to be held on October 6, 2026, at Okada Manila, Parañaque City.

The Philippine College of Poultry Practitioners (PCPP) deeply values its partnership with PHILSAN and recognizes the important role of animal nutritionists in advancing poultry health, productivity, food security, and sustainability. The continued exchange of knowledge and collaboration among professionals in animal health and nutrition are essential in addressing the evolving challenges and opportunities facing the Philippine poultry industry.

May this year's convention provide a meaningful platform for learning, collaboration, and the sharing of innovative ideas that will further strengthen the animal industry. We commend PHILSAN for its continued commitment to professional excellence and for contributing to the advancement of science and technology in animal nutrition.

On behalf of the PCPP, I wish PHILSAN and all the participants a successful and productive 39th Annual Convention. May this gathering further strengthen our shared commitment to building a healthier, more sustainable, and globally competitive Philippine poultry industry.

Congratulations and best wishes for a successful convention!

DR. JOSEFINA B. CRUZ
President
Philippine College of Poultry Practitioners (PCPP))

MESSAGE

It is with great pride and heartfelt joy that I extend my warmest congratulations to the Philippine Society of Animal Nutritionists (PHILSAN) as we celebrate the 39th PHILSAN Annual Convention.

This occasion is especially meaningful to me. As President of the Animal Nutrition Practitioners Association of Batangas (ANPAB) and, at the same time, a proud member of PHILSAN, I have had the privilege of seeing firsthand how our organizations bring people together—not only as fellow professionals, but as colleagues and friends who share a genuine passion for animal nutrition and Philippine agriculture.

This year's theme, "Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future,"reminds us that progress is not achieved by one person or organization alone. It is built through the knowledge we willingly share, the partnerships we nurture, and our collective determination to find better solutions for our farmers, producers, animals, and communities.

For nearly four decades, PHILSAN has created a home for learning, collaboration, and professional growth. It has connected generations of animal nutritionists, veterinarians, researchers, academicians, and industry partners, inspiring us to continuously improve our craft while never losing sight of the people we ultimately serve.

As both an ANPAB leader and a PHILSAN member, I am proud of the friendship and shared purpose that bind our communities together. May we continue to support one another, inspire the next generation of animal nutrition professionals, and use our knowledge not only to advance our industry but also to make a meaningful difference in the lives of Filipino farmers and producers.

To the PHILSAN officers, members, past leaders, partners, and everyone who has contributed to this remarkable journey, congratulations on 39 meaningful years of service, fellowship, and commitment to excellence.

May this convention renew our passion, strengthen old friendships, create new partnerships, and remind us that when we move forward together, we can build an animal industry that is not only more competitive and sustainable, but one that creates a better future for Philippine agriculture.

Mabuhay ang PHILSAN! Mabuhay ang ANPAB! And may we continue fueling progress, together.

Geraldine Laguardia
President, ANPAB

PHILIPPINE SOCIETY OF ANIMAL NUTRITIONISTS

MESSAGE

Maaung Adlaw!

It is with great pride and honor that I extend my warmest congratulations and full support to the Philippine Society of Animal Nutritionists (PHILSAN) on the occasion of its 39th Annual Convention.

This year's theme, **"Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future,"** resonates deeply with our shared commitment to advancing the science and practice of animal nutrition. As our industry continues to face challenges in productivity, sustainability, feed efficiency, and food security, the role of animal nutritionists has become more vital than ever.

This convention is a testament to PHILSAN's continuing commitment to professional excellence, innovation, knowledge sharing, and collaboration. It brings together experts, practitioners, academicians, researchers, industry partners, and future animal nutritionists to exchange ideas and create solutions that will strengthen our livestock and poultry industries.

As **PHILSAN VisMIN Chapter**, we are proud to stand alongside the national organization in pursuing a more competitive, resilient, and sustainable animal industry. May this gathering inspire us to embrace innovation, strengthen our partnerships, and continue transforming knowledge into meaningful impact.

Congratulations to the PHILSAN National Board, Convention Committee, partners, sponsors, and all delegates who made this significant event possible.

May the 39th PHILSAN Convention be a successful and inspiring celebration of our profession and a meaningful step toward a stronger future for Philippine animal nutrition.

Together, let us continue to fuel progress and shape a better, more sustainable future for animal nutrition.

Mabuhay ang PHILSAN!

Mabuhay ang Animal Nutritionists ng Pilipinas!

RIZLE D. HILBERO
President, PHILSAN VisMIN Chapter

PHILIPPINE SOCIETY OF ANIMAL NUTRITIONISTS
Catalan Compound, Silangan Road,
Brgy. Batong Malake, Los Baños, Laguna

MESSAGE

Warmest greetings to our distinguished guests, esteemed speakers, generous sponsors, valued collaborators, industry colleagues, and partners in advancing the science and practice of Animal Nutrition.

On behalf of the Philippine Society of Animal Nutritionists (PHILSAN), it is with immense pride, excitement, and heartfelt gratitude that I welcome you all to the 39th PHILSAN Annual Convention, with the theme: **"Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future."**

The Philippine animal industry has journeyed through remarkable periods of growth, innovation, and transformation, while also confronting challenges that have tested its resilience. Advances in technology, nutrition, production systems, and sustainable practices have opened new opportunities, even as the industry continues to navigate rising feed costs, animal health concerns, supply chain disruptions, and broader global economic uncertainties.

Amid these realities, animal nutritionists play a vital role in strengthening our industry and advancing food security. Through science-based nutrition, sound feed formulations, efficient feed manufacturing, and the responsible application of innovative technologies, we contribute to improving animal performance, production efficiency, profitability, and sustainability. Our responsibility goes beyond formulating feeds; it is about creating solutions that help ensure a more resilient and food-secure future for our nation.

Since its establishment in 1988, **PHILSAN has remained steadfast in its commitment to advancing Animal Nutrition in the Philippines.** Through our annual conventions and various professional initiatives, we have created meaningful avenues for the exchange of knowledge, innovations, technologies, and best practices from both local and international experts. More importantly, PHILSAN has fostered collaboration among government, academe, industry, and other stakeholders, recognizing that meaningful progress is achieved when we work together toward a common purpose.

This year, we once again continue that tradition of bringing timely, relevant, and impactful knowledge, technologies, and solutions to our members and stakeholders. Our program is designed to address emerging challenges, explore opportunities across various disciplines of the animal industry, and help maximize the performance potential of our animals. We are privileged to welcome speakers from government, academe, and the private sector, experts in their respective fields, as well as leaders whose experiences in transformative management and innovation can inspire us to think differently and lead with greater purpose.

I encourage everyone to make the most of this convention. **Be curious. Ask questions. Seek clarity. Challenge conventional thinking. Exchange ideas. Build connections.** Engage with our speakers, fellow professionals, and exhibitors. Explore the technologies, products, and solutions presented, and consider how these can be translated into meaningful improvements in your own organizations and practices.

Progress begins with an open mind, the willingness to learn, to adapt, and, when necessary, to embrace new ways of doing things. May this convention not only expand our knowledge but also inspire us to transform that knowledge into action.

As my term comes to a close, I would also like to express my deepest appreciation to everyone who has contributed to making this convention and our organization's continuing work possible.

To our **Convention committee**, thank you for your perseverance, commitment, and unwavering dedication in bringing this important gathering to life.

To our **Donor Members**, we extend our sincere gratitude for your continued generosity and steadfast support of PHILSAN and its advocacy.

To our **sponsors and partners, both longstanding and new**, thank you for your invaluable contributions and for helping bring distinguished experts and relevant technologies to our community. Your partnership enables us to broaden perspectives, strengthen capabilities, and make meaningful knowledge accessible to our members and stakeholders.

And to the **men and women of PHILSAN**, who continue to champion the science and profession of Animal Nutrition in the Philippines and beyond, I extend my deepest gratitude. Your dedication, expertise, and tireless efforts are the foundation upon which our organization continues to grow and serve its purpose.

As we gather for this 39th Annual Convention, let us remember that the future of Animal Nutrition is not shaped by knowledge alone, but by **how we choose to use that knowledge to create impact**.

May this convention fuel new ideas, strengthen partnerships, inspire innovation, and empower each of us to contribute to a more **competitive, resilient, andsustainable animal industry**.

Together, let us continue to move PHILSAN and Philippine Animal Nutrition forward!

Mabuhay ang PHILSAN!

Mr. Timothy Paolo M. Bagui, R.Agr., M.Sc.
President 2025-2026
Philippine Society of Animal Nutritionists

Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future

October 6, 2026 | 6:30 AM - 6:00 PM | Okada Manila, Parañaque City, Metro Manila, Philippines

Plenary Session
Plenary Hall

6:30 AM	*Registration & Networking in Exhibit Booths*	
8:00 AM	*Invocation, The Philippine National Anthem and Safety Orientation*	
8:15 AM	Official Opening of the Convention	**Mr. Timothy Paolo M. Bagui, MSc., RAgr** President, PHILSAN 2024-2026
8:25 AM	Message of Support	**Senator Francis "Kiko" N. Pangilinan** Committee Chairman Agriculture, Food, and Agrarian Reform Senator of the Philippines, 20th Congress
8:35 AM	From Roadmaps to Investments: Shaping the Future of Philippine Livestock and Poultry Sector	**Assistant Secretary Michael Garcia** DA-Assistant Secretary for Swine and Poultry Department of Agriculture
8:50 AM	Welcome Remarks from the Chairman, House Rules and Acknowledgements	**Mr. Jerico Rod S. Calibo, MSc., RAgr** Vice-President & Convention Chairman PHILSAN 2024-2026
9:00 AM	Feeding the Future Building a Stronger Philippine Livestock and Poultry Industry	**Atty. Kenneth G. Cheng** Chief Executive Officer Bounty Fresh Group Holdings, Inc.
9:35 AM	Industry Update and Outlook in Swine Nutrition	**Dr. Rommel C. Sulabo** Professor 12 | Scientist 2 University of the Philippines Los Baños
10:10 AM	Philippine Dairy Industry: Current Status and Innovations in Ruminant Feeding	**Dr. Arnel N. Del Barrio** Adjunct Professor University of the Philippines Los Baños
10:45 AM	RA 12215: The Importance of Animal Nutrition in Philippine Agriculture	**Dr. Karen S. Bautista** Past President Philippine Agriculturists Association Inc. (PAA)
11:20 AM	Panel Q&A Session	**Mr. Jerico Rod S. Calibo, MSc., RAgr** and **Ms. Amelita Gabrielia R. Resontoc-Galban, MSc.** **Plenary Session Moderators**
11:40 AM	Introduction of the 2026 PHILSAN Outstanding Animal Nutritionist (OAN)	**Dr. Josefina Cruz** 2025 PHILSAN Outstanding Animal Nutritionist Awardee
11:50 AM	Message from the 2026 PHILSAN OAN Awardee	**Dr. Ameer A. Pahm** 2026 PHILSAN Outstanding Animal Nutritionist Awardee
12:00 PM	*Lunch Break | Group Photo | Networking in Exhibit Booths*	
1:30 PM	**Learning Sessions** **Session 1 - Next Generation Precision Nutrition** **Session 2 - Beyond Nutrition Feed Solutions** **Session 3 - Gut Microbiome Revolution**	

Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future

October 6, 2026 | 6:30 AM - 6:00 PM | Okada Manila, Parañaque City, Metro Manila, Philippines

Learning Session 1: Next Generation Precision Nutrition

Grand Ballroom 1

Lead Moderator: Dr. Joice San Andres

1:30 PM	Effect of replacing inorganic Cu by chelated sources with Methionine-Hydroxy-Analogue on performance parameters and mineral excretion in broiler	**Mr. David Sanchez Torres, MSc.** Senior Regional Technical Services Manager **Novus International Pte. Ltd.**
2:10 PM	Beyond Iron: Nutritional Strategies to Support Hemoglobin Status in Modern Hyperprolific Sows	**Dr. Fabio Catunda** Global Swine Director **ADM Philippines Inc.**
2:45 PM	Beyond Amino Acids: Bioactive Peptides as Precision Peptidic Modulators in Animal Health and Performance	**Dr. Xavier Córdoba Lucio** Director of Nutribiogenics **Ultra Bio Corporation**
3:20 PM	Histidine: An Underappreciated Amino Acid in Precision Poultry Nutrition	**Dr. Jae Cheol Kim** Head-Technical Solution Center **CJ Bio**
3:50 PM	Micro-encapsulation of all 7 trace minerals towards precision, simplicity and performance	**Dr. Kevin Liu** Animal Nutrition Consultant **Pure Bioscience Phils. Inc.**
4:20 PM	**Panel Session**	**Dr. Joice San Andres & Dr. Noel Lumbo** Moderators
4:50 PM	*Coffee Break & Return to Plenary*	
5:00 PM	Awarding of Plaques of Appreciation	**Diamond, Platinum, and Gold Sponsors**
5:30 PM	The PHILSAN Feed Reference Standards 5th Edition | Summary and Closing of the Convention	**Mr. Jerico Rod S. Calibo, MSc., RAgr** Vice-President & Convention Chairman **PHILSAN 2024-2026**
5:45 PM	Raffle Draw	**PHILSAN Secretariat**
6:00 PM	*End of the 39th PHILSAN Annual Convention*	

Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future

October 6, 2026 | 6:30 AM - 6:00 PM | Okada Manila, Parañaque City, Metro Manila, Philippines

Learning Session 2 - Beyond Nutrition Feed Solutions

Grand Ballroom 2

Lead Moderator: Dr. Sarah C. Pahm

1:30 PM	Benefits of Gamma Amino Butyric Acid (GABA) as Functional Feed Additive in Animals	**Dr. Metta Makhanon** Animal Health Consultant **AgriPro Premier Nutrition Inc.**
2:10 PM	The Evolving Ethanol Process: From Corn to Corn Fermented Protein Optimum Nutrient Levels and Stronger Margins in Modern Corn-Soy Feed Formulation	**Dr. Budi Tangendjaja** **Dr. Rhona Niña Reyes** **Indiana Corn Marketing Council and Indiana Soybean Alliance**
2:45 PM	Ruminants' Resilience in Tropical Production System	**Dr. Pietro Celi** Faculty Member **Murdoch University**
3:20 PM	Management & Feeding Strategies in Modern Tilapia Farming	**Dr. Karl Marx Quiazon** Director **Central Luzon State University**
3:50 PM	Next Generation of Animal Nutrition: Enhancing Feed Value Through Canadian Peas	**Dr. William Riley** Professor & Consultant **Pulse Canada**
4:20 PM	**Panel Session**	**Dr. Sarah C. Pahm & Mr. Rizle Hilbero, MSc.** Moderators
4:50 PM	*Coffee Break & Return to Plenary*	
5:00 PM	Awarding of Plaques of Appreciation	**Diamond, Platinum, and Gold Sponsors**
5:30 PM	The PHILSAN Feed Reference Standards 5th Edition | Summary and Closing of the Convention	**Mr. Jerico Rod S. Calibo, MSc., RAgr** Vice-President & Convention Chairman **PHILSAN 2024-2026**
5:45 PM	Raffle Draw	**PHILSAN Secretariat**
6:00 PM	*End of the 39th PHILSAN Annual Convention*	

Fueling Progress: Shaping Animal Nutrition for a Competitive and Sustainable Future

October 6, 2026 | 6:30 AM - 6:00 PM | Okada Manila, Parañaque City, Metro Manila, Philippines

Learning Session 3: Gut Microbiome Revolution

Grand Ballroom 3

Lead Moderator: Mr. Noel DLC. Salazar, MSc., RAgr

1:30 PM	From Gut Microbiome to Performance: Turning Microbial Insights into Nutritional Solutions	**Ms. Jocelyn V. Mariquilla** Regional Technical Services Manager **Cargill Micronutrition and Health Solutions**
2:10 PM	Bacillus amyloliquefaciens CECT 5940: Unlocking Productivity Through Microbiome Modulation and Gut Health in Poultry	**Dr. Balachandar Jayaraman** Senior Technical Service Manager **Evonik**
2:45 PM	Fueling the Future of Animal Nutrition with Immunopeptides: Enhancing Gut Health, Immunity, and Sustainable Performance	**Dr. Concepcion D. Villacorta** Assistant Professor **JCS Chemical Industries Inc.**
3:20 PM	Gut Health Optimization: The Role of Dairy-Derived Ingredients in Pre- and Post-Weaning Piglet Diets	**Mr. Johan Lemmen** Business Development Manager **Nutrifeed B.V.**
3:50 PM	From Gut Microbiota to Host Resilience: Integrating the Gut-Immune Axis for Sustainable Pig Production	**Dr. Suparlark Nuntawan Na Ayudhya** Regional Technical Services Manager **Novonesis**
4:20 PM	**Panel Session**	**Mr. Noel DLC. Salazar, MSc., RAgr & Ms. Jennifer Juanillas** Moderators
4:50 PM	*Coffee Break & Return to Plenary*	
5:00 PM	Awarding of Plaques of Appreciation	**Diamond, Platinum, and Gold Sponsors**
5:30 PM	The PHILSAN Feed Reference Standards 5th Edition | Summary and Closing of the Convention	**Mr. Jerico Rod S. Calibo, MSc., RAgr** Vice-President & Convention Chairman **PHILSAN 2024-2026**
5:45 PM	Raffle Draw	**PHILSAN Secretariat**
6:00 PM	*End of the 39th PHILSAN Annual Convention*	

Senator Francis "Kiko" N. Pangilinan
Chairman - Agriculture, Food, and Agrarian Reform
Senator of the Philippines, 20th Congress

Senator Francis "Kiko" N. Pangilinan has long championed agricultural policy throughout his legislative career, including executive leadership as the Presidential Assistant for Food Security and Agricultural Modernization. He has consistently prioritized national food security, agricultural development, and the welfare of small-scale farmers and fisherfolk. His legislative work has supported initiatives focused on curbing illegal smuggling, addressing climate risks like El Niño, and advancing countryside enterprise development.

Through strategic policy interventions, he continues to support institutional efforts aimed at modernizing the local agricultural economy and securing sustainable livelihoods for rural food producers.

Assistant Secretary Michael Garcia
DA-Assistant Secretary for Swine and Poultry Department of Agriculture

Asec. Michael J. Garcia is Assistant Secretary for Swine and Poultry of the Department of Agriculture, where he leads national efforts to strengthen these sectors through science-based policy, enhanced biosecurity, and industry collaboration.

Before his government appointment, he held senior executive roles across major industries, including Senior Manager in the San Miguel Corporation Packaging Division, Assistant Vice President for Ginebra San Miguel Inc., and President and General Manager of AMG Agri-Ventures Inc.

He is a graduate of Ateneo de Manila University, holding degrees in AB Economics and BS Management, which underpin the blend of strategic insight and operational expertise he brings to his career. A strong advocate for innovation and public-private partnerships, Garcia continues to work toward building a resilient and globally competitive livestock industry.

PLENARY SPEAKERS

Atty. Kenneth G. Cheng
Chief Executive Officer & President
Bounty Fresh Group Holdings, Inc.

Atty. Kenneth Cheng is a visionary who has spent nearly four decades shaping the landscape of Philippine agribusiness. From Bounty's humble beginnings as a family enterprise to its current status as a diversified global player, he has been one of the primary architects of its growth.

He did not just manage the business; he helped built the entire value chain from the ground up that have made Bounty a household name. Under his leadership, the organization has transformed into becoming the one of the leading poultry businesses in the Philippines, with a clear trajectory toward becoming the region's premiere food and agribusiness leader. His influence extends far beyond our borders, as he oversees an extensive international portfolio with board seats in major agricultural entities in Indonesia and New Zealand.

A proud alumnus of the University of the Philippines with a degree in Economics and Political Science, he went on to earn his Juris Doctor from San Beda College and was admitted to the Philippine Bar in 1990. To further his global perspective, he also completed the International Director's Programme at INSEAD in Singapore and France.

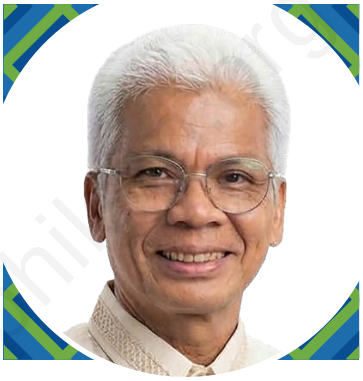
He joins us today to share invaluable insights and wisdom earned through forty years of navigating the complexities of the food industry.

Dr. Rommel C. Sulabo
Professor 12, Institute of Animal Science, CAFS, UPLB

Dr. Rommel C. Sulabo is Professor of Animal Nutrition at the Institute of Animal Science, University of the Philippines Los Baños. After earning his BS in Agriculture from UP Los Baños in 1997, he spent several years in the Philippine animal feed industry as an R&D nutritionist and extension specialist before pursuing advanced studies abroad.

He completed his MS in Swine Nutrition at South Dakota State University and his PhD in Swine Nutrition at Kansas State University, followed by postdoctoral research in Dr. Hans Stein's laboratory at the University of Illinois.

His contributions to the field include more than 50 scholarly publications and honors such as the Outstanding Young Scientist for Animal Science Award from NAST-DOST in 2014, the Outstanding Animal Nutritionist Award from PSAS-Philchem Inc. in 2017, and the Distinguished Researcher in Animal Science Award from PSAS in 2019, and he is ranked the top animal science scientist in the Philippines by the AD Scientific Index.



Dr. Arnel N. Del Barrio
Adjunct Professor, Institute of Animal Science, CAFS, UPLB

Dr. Arnel N. Del Barrio is an accomplished agriculturist, academic, and specialist in ruminant nutrition and animal production. He holds a Bachelor of Science in Agriculture, Master of Science, and Doctor of Philosophy degrees from the University of the Philippines Los Baños (UPLB).

He has served as a Professor at UPLB's Institute of Animal Science, Director of the Dairy Training and Research Institute, and Executive Director III of the Philippine Carabao Center under the Department of Agriculture.

His achievements include recognition as an Academician of NAST-DOST, Career Scientist I, Outstanding Young Scientist, and PSAS Distinguished Fellow. He has also served as National President of both the Philippine Society of Animal Science and the Philippine Society of Animal Nutritionists.

Dr. Karen S. Bautista
Philippine Association of Agriculturists, Inc (PAA)

Dr. Karen S. Bautista, Ph.D. is an agriculturist and soil science specialist with extensive experience in agronomy, soil health, sustainable land management, and agricultural research.

She holds a Ph.D. in Agronomy with a cognate field in Soil Science from the University of the Philippines Los Baños, as well as an M.S. in Horticulture from Colorado State University. She currently serves as Chief Science Research Specialist at the Department of Agriculture–Bureau of Soils and Water Management (DA-BSWM), where she leads research and technical initiatives related to soil and water resources.

Dr. Bautista has presented research at international soil science and agricultural conferences across Asia and North America and has contributed to initiatives on soil health, carbon sequestration, sustainable agriculture, and soil and nutrient management. Her professional leadership includes serving as National President of the Philippine Association of Agriculturists and the Philippine Society of Soil Science and Technology. Her achievements include multiple DA-BSWM leadership and excellence awards, the 2026 PSSST Achievement Award, the 2025 PSSST Distinguished Service Award, and recognition for academic excellence from UPLB, SEARCA, and Colorado State University.

Mr. David Sanchez Torres, MSc.
Senior Regional Technical Services Manager | Novus International

Raised in an agricultural environment, David Sanchez Torres built a career in animal nutrition driven by a commitment to solving customer challenges. He is currently Senior Regional Technical Services Manager for Asia Pacific at Novus Inc., leading the region's technical services team to support customers on production and performance goals, having held similar roles for North and South America and earlier supported sales and marketing alignment across the Americas.

Before Novus, he served as Regional Manager and Product Leader for Latin America at Alltech and as International Technical Manager at Premex. He holds a degree in Animal Science from Universidad de La Salle in Colombia, a master's in Animal Nutrition from the University of Viçosa in Brazil, and a business degree from Universidad Industrial de Santander in Colombia. He is a member of AMEVEA, the Colombian Association of Veterinarians and Zootechnicians Specializing in Poultry, with expertise spanning poultry nutrition, mineral metabolism, and feed enzymes.

Dr. Fabio Catunda
Global Swine Director | ADM Animal Nutrition

Fabio Catunda is Global Swine Director at ADM Animal Nutrition, a role he assumed in 2026 after serving as Technical and Innovation Director for Latin America and Vice President for Europe and Africa within the company. His career in animal nutrition began in business development at Alltech Ireland and continued with Phileo by Lesaffre Animal Care, where he served as Global Swine Manager.

He holds a degree in Animal Science from the University of the State of São Paulo and an MBA in Agribusiness from University College Dublin. Mr. Catunda has served as a director of the Brazilian College of Animal Nutrition, which also recognized him as one of Brazil's references in the swine industry.

Dr. Xavier Córdoba Lucio
Director of Nutribiogenics | Ultra Bio Corporation

Dr. Xavier Córdoba Lucio, DVM, MBA, is a veterinarian and animal nutrition specialist with over 25 years of experience spanning nutrition, product development, quality management, and business strategy. He built his career at Bioiberica, progressing through product and business leadership roles before serving as Director of Animal Nutrition for nearly a decade, and he now leads Nutribiogenics as Director, focusing on innovative nutritional solutions for animal health and production.

He holds a Doctor of Veterinary Medicine degree from the Autonomous University of Barcelona and an MBA from the Central University of Catalonia, and is a licensed veterinarian in Barcelona. An active international speaker, Córdoba has presented at major conferences and professional forums across Europe, Asia, Latin America, and the United States, including PHILSAN in Manila, on topics ranging from functional proteins and poultry nutrition to oxidative stress, hepatoprotection, pet health, and aquaculture. His blend of technical depth and commercial experience gives him a practical, industry-grounded perspective on applying nutritional science across species.

Dr. Jae Cheol Kim
Head-Technical Solution Center | CJ Bio

Dr. Jae Cheol Kim is Global Head of Amino Acid Nutrition at CJ CheilJedang Bio and has served as Head of the company's APAC Technical Solution Center since 2022. His specialization in animal nutrition and physiology is grounded in a career that includes technical management at AB Vista Asia and research in pork innovation for Western Australia's Department of Agriculture and Food.

He holds a Ph.D. in Digestive Physiology and Nutrition from Murdoch University, where he also served as an adjunct senior lecturer and associate professor. He has been a member of the Australasian Pig Science Association since 2000 and sits on the editorial board of the journal Animal Bioscience. Drawing on this deep background in amino acid nutrition and digestive physiology, he is a frequent speaker at regional conferences on precision nutrition and efficient, sustainable poultry and swine production.

Dr. Kevin Liu
Animal Nutrition Consultant | Pure Bioscience Phils. Inc.

Dr. Kevin Liu holds a B.Sc. and M.Sc. in animal sciences and feed nutrition from Sichuan Agricultural University, China, and a Ph.D. in agricultural and environmental sciences from Wageningen University, the Netherlands, with postdoctoral training in feed enzymes and swine metabolism from the University of Manitoba, Canada.

His career began in research on feed ingredients, digestibility, trace minerals, and enzymes for poultry, swine, and ruminants before he moved into industry in the early 1990s, holding technical and business roles at Roche, Kemin, and Adisseo. He has published extensively in peer-reviewed journals and conference proceedings, building deep expertise in practical nutrition and feed additives. Fluent in English and Chinese, he now works as an independent nutrition consultant based in Singapore.

Dr. Metta Makhanon
Animal Health Consultant | AgriPro Premier Nutrition Inc.

Dr. Metta Makhanon, DVM, MBA, Ph.D., is a veterinary and animal health expert with over 30 years of experience in swine health, disease management, technical services, and animal health consulting across Southeast Asia, including Thailand, Vietnam, China, the Philippines, Indonesia, Cambodia, Malaysia, and Taiwan. Her career includes senior technical roles at Novartis Animal Health, Elanco, and Ceva Animal Health Asia, building deep specialization in African Swine Fever, PRRS, PCV2, mycoplasma, biosecurity, immunology, and vaccinology. She holds a DVM and a Ph.D. in Veterinary Pathobiology from Chulalongkorn University, where she now serves as a visiting lecturer, along with an MBA from Ramkhamhaeng University in Bangkok. She currently serves as President of the Thai Swine Veterinary Association, a position she holds through 2028, and works as an independent Animal Health Consultant with expertise extending to aquaculture, poultry, and ruminant health, recognition that includes the Association's Lifetime Achievement Award in 2022 and Chulalongkorn's Outstanding Alumni Award in 2025. A regular presenter to veterinarians and industry associations such as TSVA, CUVC, FAO, and FAVA, she covers swine disease management topics ranging from ASF control and biosecurity to PRRS strategies and PCV2 vaccination programs.

Dr. Budi Tangendjaja
Technical Consultant

Dr Budi, a well-known animal nutritionist and feedmill expert in Indonesia, currently holds a post as Technical Consultant in Southeast Asia based in Indonesia. Dr Budi received his undergraduate training in Agriculture from Bogor Agricultural University (1976) and followed by Magister Sains (1978) from the same University. He then spent several years to obtain Master of Applied Science (1980) and PhD (1983) from University of New South Wales in Sydney, Australia. He has conducted post-doctoral work in Animal Nutrition at the University of Arkansas in the USA (1986). He had worked as Research Scientist for Research Institute for Animal Production, Ciawi Bogor, Indonesia for more than 30 years and received consulting job with ASA IM (15 years) before joining US Grains Council for over 20 years to cover technical services in Southeast Asia. Dr Budi has many research interests including raw material quality control, development of alternative ingredients, feed additives, processing of animal feed, animal nutrition and feedmill management. In the last two decades he has traveled extensively to several countries in Southeast Asia, South Asia, and other countries to deliver talks and teach in seminars and workshops.

Dr. Rhona Niña Reyes
Technical Consultant

Dr. Rhona Niña Reyes is Technical Consultant for the Philippines at the U.S. Soybean Export Council, where she spearheads initiatives to strengthen market preference for U.S. soy and soy-derived products, leading technical programs and cultivating partnerships with key stakeholders across the Philippines and, when needed, other markets in East and South Asia. Before joining USSEC, she worked as Regional Technical Manager for a leading feed formulation software company, providing technical solutions and helping drive business development in the Asia-Pacific region. Her career also includes roles as a nutritionist and consultant for reputable companies in the Philippines and Vietnam, where she contributed to optimizing feed, basemix, and vitamin-mineral premix formulations, while supporting sales of manufactured and distributed products including various feed additives. She earned her straight Ph.D. in Animal Science, majoring in Animal Nutrition with a minor in Biochemistry, and BS in Agriculture, both from the University of the Philippines Los Baños. Her doctoral research on energy determination and prediction equations for feed ingredients continues to inform her work supporting more precise animal nutrition.

Dr. Pietro Celi
Faculty Member | Murdoch University

Dr. Pietro Celi is an accomplished expert in veterinary medicine, animal physiology, nutrition, and reproduction with over 25 years of experience across both academia and the private sector. His career spans key roles in animal health, nutrition, and performance solutions, where he has successfully led technical and commercial initiatives across global and regional markets. Currently serving as the APAC Ruminant Technical Manager for ADM, Dr. Celi is committed to driving scientific advancements and delivering innovative solutions in ruminant nutrition.

He is also an Honorary Senior Fellow at the University of Melbourne, contributing to the academic community while advancing industry leadership. Over 150 peer-reviewed journal papers, 4 book chapters, and 160 conference papers focused on animal nutrition and health. Editorial Board member for Journal of Dairy Research Engaged audiences globally in academic and industry-leading events, with over 50 invited talks at international conferences, workshops, and seminars on animal health, nutrition, and production.

Dr. Karl Marx Quiazon
Director | Freshwater Aquaculture Center CLSU

Dr. Karl Marx Andaya Quiazon is the Director of the Freshwater Aquaculture Center at Central Luzon State University, where he also serves as a faculty member of the College of Fisheries specializing in aquatic animal health and parasitology. He earned his Ph.D. in Agriculture from the University of Tokyo in 2009, with doctoral research on parasitic nematodes, including Anisakis, infecting marine fishes of Japan, and has built an extensive international publication record on Anisakis biology, host prevalence, and seafood safety.

In 2016, he served as a Fulbright Visiting Scholar at the College of Charleston's Department of Biology, researching the use of anisakid nematodes as biological tags for fish stock assessment in Philippine and American waters. He currently leads CLSU's aquaculture research initiatives, including an IDRC-funded action research project on climate-resilient small-scale aquaculture for sustainable aquatic food systems. His career reflects a steady arc from foundational parasitology research to applied, community-oriented aquaculture science.

Dr. William Riley
Professor & Consultant | Pulse Canada

Dr. Riley received a Ph.D. in Nutritional Biochemistry from Cornell University in the U.S., and he completed post-doctoral studies in Biochemistry at the University of Minnesota and in Endocrinology at the University of Manitoba in Canada. He has worked as a professor and in industrial settings in the U.S., Canada, China, and the Philippines, and with Agriculture and Agri-Food Canada in Ottawa. His research experience has involved studies with humans, rats, poultry, swine, and aquatic species. Dr. Riley has operated a consulting business from his Hong Kong office since 2012, and he most recently served as an Adjunct Professor in the Department of Biology at the University of the Philippines-Visayas and in the Institute of Environmental and Marine Sciences at Silliman University in Dumaguete, Negros Oriental, Philippines. He now resides in Nanning, Guangxi, China with his wife, where he continues with his consulting activities in aquaculture, companion animal, and human health and nutrition throughout the Asia-Pacific Region.

Ms. Jocelyn V. Mariquilla
Regional Technical Services Manager | Cargill Micronutrition and Health Solutions

Jocelyn "Joy" Mariquilla is Technical Services and Technology Manager for Cargill's Micronutrition and Health Solutions business across Southeast Asia, Thailand, and Japan. Her nearly two-decade career in animal nutrition spans feed formulation, R&D, technical services, and digital nutrition solutions, built through progressive technical and leadership roles at Cargill Philippines and other major animal nutrition companies. Her expertise extends to poultry nutrition, feed manufacturing technology, and NIRS-based nutrition systems, reflecting a career focused on translating research into practical feed solutions. She holds a degree in Agriculture from the University of the Philippines Los Baños, where she also pursued graduate studies in Animal Science. Recognized as a finalist for Cargill's Global Breakthrough Awards in 2024 and named a Feeding Champion Regional Champion in 2025, She is a regular speaker at regional conferences on feed technology and poultry nutrition, bringing both technical depth and industry-wide visibility to her work.

Dr. Balachandar Jayaraman
Senior Technical Service Manager | Evonik

Dr. Balachandar Jayaraman is a veterinarian and Senior Technical Manager at Evonik Methionine (SEA) Pte. Ltd., specializing in monogastric nutrition and specialty nutrition. He joined Evonik SEA Pte Ltd in 2017 as Technical Service Manager, later served as Swine Research Manager, and advanced to his current role in 2023.

He holds a Bachelor of Veterinary Science and Animal Husbandry from Pondicherry Veterinary College in India, a Master's degree from Dalhousie University in Nova Scotia, Canada, and a Doctorate from the University of Manitoba. This combination of veterinary training and advanced nutrition research underpins his work supporting Evonik's monogastric nutrition programs across Southeast Asia. Based in Singapore, Dr. Jayaraman brings more than a decade of regional technical experience in swine and specialty animal nutrition to the industry.

Dr. Concepcion D. Villacorta
Assistant Professor | JCS Chemical Industries Inc.

Dr. Concepcion Del Pilar Villacorta is a veterinarian, educator, and agribusiness entrepreneur working at the intersection of livestock health and agricultural education. She holds a Doctor of Veterinary Science and Medicine degree from Central Luzon State University. She currently serves as a Part-Time Assistant Professor at the Institute of Veterinary Medicine, Bulacan Agricultural State College, where she trains the next generation of veterinary professionals, while maintaining an active poultry veterinary practice and managing her own farm operations as an owner-entrepreneur. This combination of academic teaching and hands-on commercial experience allows her to bridge scientific theory with practical farm management, making her a compelling speaker on poultry health, modern veterinary practices, and agricultural entrepreneurship.

Mr. Johan Lemmen
Business Development Manager | Nutrifeed B.V.

Johan Lemmen is the Business Development Manager at Nutrifeed, specializing in young animal nutrition. He graduated from HAS University of Applied Sciences in Den Bosch, the Netherlands, and began his career with Nutrifeed 25 years ago as a Researcher for Piglets in the Research and Development department.

For young animals, finding and maintaining an optimum balance between environment, care, and nutrition has been a central focus throughout his career, which has included roles in research, development, marketing, product innovation, and global market development. His professional journey spans more than two decades with Nutrifeed and its parent company, FrieslandCampina, before moving to Denkavit in 2021. Drawing on extensive expertise in piglet nutrition, and research, he is responsible for the global portfolio and business development activities of Nutrifeed while supporting nutrition programs for piglets and other young livestock across international markets.

Dr. Suparlark Nuntawan Na Ayudhya
Regional Technical Services Manager | Novonesis

Dr. Suparlark Nuntawan Na Ayudhya is a veterinarian and animal health scientist with more than 20 years of professional experience in swine and poultry production, gut health, disease management, and nutritional interventions. He currently serves as Regional Technical Services Manager for Asia Pacific at Novonesis, leading regional programs on probiotics, enzymes, and biosolutions and acting as the scientific interface between R&D, marketing, sales, and customers.

His career also includes senior technical roles at other global animal health and nutrition companies, where he led antimicrobial reduction and Salmonella control programs, along with earlier hands-on experience in swine health management. He holds a Doctor of Veterinary Medicine and a Master of Science in Pathobiology, both from the Faculty of Veterinary Science, Chulalongkorn University, and has authored or co-authored numerous peer-reviewed publications on swine and poultry diseases, including PRRS, PCV2, and antimicrobial alternatives. His expertise in designing and interpreting research trials has made him a trusted voice in translating science into practical solutions for the livestock industry across Asia-Pacific.

LEARNING SESSION 1: Next Generation Precision Nutrition

Effect of replacing inorganic copper by chelated sources with Methionine-Hydroxy-Analogue on performance parameters and mineral excretion in broiler.

Mr. David Sanchez Torres, MSc.
Novus International Pte. Ltd.

ABSTRACT

Poultry industry has been using high dosages of inorganic copper (Cu) due to its effect on broiler performance. However, concerns of high levels of Cu producing environment contamination have arisen in the past decades. The usage of high bioavailable sources of minerals, as organic chelated minerals, might be an option to reduce the dietary levels of Cu while maintaining flocks' high performance. Two experiments were carried out to evaluate the effect of replacing high dosage of inorganic Cu to lower levels of Methionine-Hydroxy-Analogue Chelates (MHAC) Cu on broilers. Experiment I evaluated the effect of replacing common trace mineral program with reduced levels of organic chelated minerals (MHAC Zinc (Zn), Cu, Manganese (Mn)) on growth performance; experiment II evaluated the replacement of high dosage of Tri-Basic Copper Chloride (TBCC) with MHAC Cu on mineral excretion. In experiment 1, 2,250 day old chicks Ross AP308 were randomly distributed into 4 treatments with 15 replicates of 25 birds per pen. The treatment groups were: T1. 110 ppm Zn-Sulfate, 125 ppm TBCC and 120 ppm Mn-Sulfate; T2. 110 ppm Zn-Sulfate, 30 ppm MHAC-Cu and 120 ppm Mn-Sulfate; T3. 40 ppm MHAC-Zn, 30 ppm MHAC-Cu and 120 ppm Mn-Sulfate; T4. 40 ppm MHAC-Zn, 30 ppm MHAC Cu and 40 ppm MHAC-Mn. Broilers were fed with an iso-nutritional corn-soy diet except for Zn, Cu and Mn, using a feeding program: Starter (1-21 d), Grower (22-35 d) and Finisher (36-45 d). Feed intake (FI), body weight (BW), feed conversion ratio adjusted by mortality (FCR AdjM) were evaluated at 21, 35and 45 days. In the experiment II, 192 day-old chicks Ross 308AP were randomly distributed in 2 treatments with 8 replicates of 12 birds per pen. The treatments were similar for all nutrients but the inclusion and sources of Cu were as follows: T1: 125 ppm Cu TBCC, and T2: 30 ppm MHAC-Cu. Data was compared using Tukey's test with a probability of 5%. Experiment I, the results showed that from 1 to 45 days, there were statistical differences in BW, FCR AdjM across treatments. In addition, contrasts between T1 vs T2, T3, and T4 were significantly different($P<0.05$). There was no statistical difference for FI ($P>0.05$). Experiment II, the Cu excretion was significantly lower in the group supplemented with MHAC Cu (141.9 µg/g) compared with the group supplemented with 125ppm from TBCC (360.4 µg/g) ($P<0.001$). The results indicate that high doses of inorganic Cu can be replaced by 30ppm of MHAC Cu improving performance and reducing environmental contamination due to metals excretion.

Key words: organic mineral, performance, poultry, source, copper, mineral excretion.

LEARNING SESSION 1: Next Generation Precision Nutrition

Beyond Iron: Nutritional Strategies to Support Hemoglobin Status in Modern Hyperprolific Sows

Dr. Fabio Catunda and Ermin Magtagnob
ADM Animal Nutrition

ABSTRACT

Modern sow genetics have enabled larger litters and improved productivity, but these advances have also increased the nutritional demands placed on breeding females. As a result, maintaining adequate hemoglobin status throughout gestation and lactation has become an emerging area of interest. Recent studies suggest that low hemoglobin concentrations are common in sows, particularly during late gestation and lactation, and may negatively affect both sow and piglet performance. Research by McClellan and colleagues showed that anemia is prevalent in commercial sow herds and that lower hemoglobin levels can be associated with longer farrowing duration and poorer reproductive outcomes.

Although iron is often the nutrient most closely linked with anemia, hemoglobin production depends on more than iron alone. Copper, B vitamins, vitamin C, and the sow's overall health status all contribute to red blood cell formation and iron utilization. Factors such as parity, feed intake, inflammation, and nutrient availability may also influence a sow's ability to maintain adequate hemoglobin levels.

Recent nutritional studies were conducted to evaluate whether improving the supply and utilization of key hematopoietic nutrients could support maternal hemoglobin status and piglet vitality. Results indicate that targeted nutritional strategies can help maintain hemoglobin levels during gestation and around farrowing while also supporting hemoglobin concentrations in newborn piglets.

Advances in portable hemoglobin meters now make on-farm monitoring practical. Combining hemoglobin measurements with reproductive performance, parity, feed intake, and piglet outcomes may help producers identify at-risk animals and make more informed nutritional decisions. This presentation reviews current knowledge on sow anemia and discusses practical nutritional and monitoring strategies to support maternal hematological health in modern swine production systems.

LEARNING SESSION 1: Next Generation Precision Nutrition

Beyond Amino Acids: Bioactive Peptides as Precision Peptidic Modulators in Animal Health and Performance

Dr. Xavier Córdoba Lucio
Nutribiogenics Ultra Bio Corporation

ABSTRACT

Bioactive peptides are short, sequence-specific protein fragments that act beyond their conventional nutritional role. This presentation will explain how controlled enzymatic hydrolysis and microbial fermentation, combined with complementary separation and processing technologies, can generate distinct and targeted peptide profiles. It will also examine how protein source, amino acid composition, molecular weight distribution, peptide sequence, degree of hydrolysis, and processing conditions determine biological activity.

Their principal antioxidant, antimicrobial, immunomodulatory, cytoprotective, and gut-supporting mechanisms will be discussed under the concept of Precision Peptidic Modulators. Different protein origins and production strategies will be compared, highlighting their respective advantages, limitations, and the key criteria for selecting effective peptide-rich ingredients. Finally, experimental and field results, particularly in swine, will illustrate their potential to improve protein digestibility, intestinal resilience, animal health, and productive performance.

Keywords: Bioactive Peptides, Enzymatic Hydrolysis, Molecular weight, Animal performance, Animal health

LEARNING SESSION 1: Next Generation Precision Nutrition

Histidine: An Underappreciated Amino Acid in Precision Poultry Nutrition

Dr. Jae Cheol Kim
CJ Bio

ABSTRACT

Histidine is an essential amino acid that has traditionally been recognized for its role in protein synthesis and growth. Recent advances in poultry nutrition, however, have highlighted its broader physiological functions, positioning histidine as a functional nutrient with significant implications for animal performance, meat quality, and sustainable production. Histidine serves as a precursor for biologically important compounds such as carnosine and anserine, which possess antioxidant, buffering, and anti-glycation properties that support muscle function and reduce oxidative stress. Adequate histidine nutrition has been associated with improved breast muscle development, enhanced meat quality, reduced drip loss, and increased oxidative stability, thereby contributing to greater product value and consumer acceptance. Emerging evidence also suggests that histidine plays a role in immune function, intestinal health, and resilience to environmental stressors, particularly under intensive production systems. In the context of precision nutrition and reduced-crude protein diets, optimizing histidine supply may improve amino acid utilization efficiency while minimizing nitrogen excretion and environmental impact. This presentation reviews the latest scientific findings on histidine metabolism, dietary requirements, and functional benefits in poultry, with emphasis on its application in modern broiler and layer production. Current research gaps and future opportunities for integrating histidine into precision feeding strategies will also be discussed. Understanding the multifunctional role of histidine will enable nutritionists and producers to formulate more efficient diets that enhance productivity, meat quality, and sustainability in the poultry industry.

Keywords: Histidine, poultry nutrition, functional amino acid, carnosine, meat quality, drip loss, precision nutrition, sustainability.

LEARNING SESSION 1: Next Generation Precision Nutrition

Micro-encapsulation of all 7 trace minerals towards precision, simplicity and performance

Dr. Kevin Liu
Animal Nutrition Consultant

ABSTRACT

Trace minerals (Cu, Fe, Mn, Zn, I, Se and Co) are essential components of numerous enzymes thus indispensable for metabolism, immunity, growth and reproduction. Inorganic trace minerals (ITM) are widely used in the livestock industry often in much excess, resulting in not only oxidative deterioration of feeds and intestinal health, but also large proportions to be excreted into the eco-system, leading to pollution problem drawing many jurisdictions to setup limits on their usages in feeds. Organic trace minerals (OTM), such as chelates and complexes, are of covalent binding, more stable and less reactive hence possible to reduce inclusion rates. However, OTMs have not gained wide acceptance because of their variations, oxidative property, difficulty in quality checks and costs. Encapsulation technology overcomes the above weaknesses. This technology refers to a specific process using film-forming materials such as liquid carbohydrates, atomizing and spraying onto minerals premix, followed by rapid drying to achieve protection and controlled release. The process renders the formulated the minerals into metal polysaccharides complex (MPSC), meaning all required trace minerals in a single micro-granule, "all-in-one", doing away with the troublesome in sourcing and handling trace minerals, and replacing both ITM and OTM in the final feeds, to achieve simplicity. It minimizes oxidations thus preserves nutritive quality of sensitive nutrients in premix and final feeds. We conducted a series of studies to evaluate its efficacy for broiler, layer, swine, etc. The results show: 1) When MPSC is added in descending pattern along with the age, it supported expected growth performance and carcass quality of broiler, enhanced retention of trace minerals, leading to significant reduction of supplemental trace minerals; and 2) it largely reduced excretion of trace minerals into the eco-system, by 50-70%.

LEARNING SESSION 2: Beyond Nutrition Feed Solutions

Benefits of Gamma Amino Butyric Acid (GABA) as Functional Feed Additive in Animals

Metta Makhanon DVM, MBA, PhD
Animal Health Consultant

ABSTRACT

Gamma-Aminobutyric Acid (GABA) is a four-carbon non-protein amino acid naturally synthesized via the decarboxylation of glutamic acid by gut microbiota, serving as a vital postbiotic closely related to short-chain fatty acids (SCFAs). Operating primarily as an inhibitory neurotransmitter in the central nervous system of vertebrates and invertebrates, GABA plays a critical role in central thermoregulation and the modulation of heat stress, while also being present in peripheral tissues such as the ovary, placenta, and uterus. This paper aims to illustrate the biological functions and performance benefits of GABA in livestock by reviewing recent in vitro and in vivo studies, including regional investigations conducted in Thailand and the Philippines between 2024 and 2025 by Makhanon et al., where statistically significant improvements ($P<0.05$) in stress resilience and physiological responses were observed. By synthesizing findings from current literature, the review highlights that GABA offers substantial functional advantages extending far beyond conventional gut health support, making it a promising dietary feed additive to enhance animal welfare and productivity under challenging environmental conditions.

LEARNING SESSION 2: Beyond Nutrition Feed Solutions

The Evolving Ethanol Process: From Corn to Corn Fermented Protein

Budi Tangendjaja, PhD
Technical Consultant

ABSTRACT

The ethanol industry is evolving from a single-purpose fuel business into an integrated biorefinery that produces energy, feed ingredients, corn oil, carbon dioxide, and other valuable products. One important development is corn fermented protein (CFP), a concentrated feed ingredient obtained by separating selected corn and fermentation fractions during modern dry-grind ethanol processing. Unlike conventional distillers dried grains with solubles (DDGS), CFP generally contains approximately 48–56% crude protein, lower starch, and a greater concentration of yeast-derived components. The nutritional value of CFP extends beyond its crude protein content. It supplies digestible amino acids, high metabolizable energy (ME for poultry >3000 kcal/kg), phosphorus (0.7%), and fermentation biomass. Its amino acid pattern differs from soybean meal: CFP generally provides relatively high methionine (>0.9%) and branched-chain amino acids (leucine) but less lysine (2%). Consequently, accurate formulation requires plant-specific values for standardized ileal digestible amino acids, metabolizable or net energy, available phosphorus, fiber, and sulfur. CFP has potential applications in poultry, swine, dairy, beef, aquaculture, pet food, and specialty young-animal feeds. It can partially replace soybean meals, traditional DDGS, and other protein ingredients when diets are balanced for digestible nutrients. High amount of yeast derived components may be useful functional substances to improve animal performance. However, successful use depends on ingredient consistency, palatability, feed-processing performance, mycotoxin control, regulatory compliance, and validation under local production conditions. Based on current ingredients price in the Philippines, broiler starter diet formulation indicated that CFP is economically feasible considering higher ME and higher shadow price indicated a better opportunity to reduce cost of ration. For Southeast Asian feed industries that depend heavily on imported protein, CFP offers improved freight efficiency and greater ingredient diversity. Its full value will be realized when ethanol-process precision is matched by disciplined quality control, evidence-based formulation, and transparent supplier specifications, supported by continuous technical service and monitoring.

LEARNING SESSION 2: Beyond Nutrition Feed Solutions

Optimum Nutrient Levels and Stronger Margins in Modern Corn-Soy Feed Formulation

Rhona Niña R. Reyes

ABSTRACT

In today's competitive livestock industry, feed formulation must balance biological performance with economic returns. Traditionally, feed formulation has focused on achieving nutritional requirements at the lowest possible cost. However, modern nutrition programs increasingly recognize that the most profitable diet is not always the least expensive one. Advances in economic optimization and growth modeling enable nutritionists to evaluate nutrient specifications based on their impact on animal performance, feed efficiency, and financial returns. The presentation examines how economic optimization principles can be applied to corn-soy feed formulation, while considering growth responses and strategic ingredient selection to maximize margin-over-feed-cost and overall business performance. As feed costs and market pressures continue to challenge livestock producers, nutrition professionals must adopt strategies that optimize both biological performance and economic returns. By integrating economic optimization, growth modeling, and strategic ingredient selection into feed formulation practices, professionals can make more informed decisions that improve profitability and sustainability. This session provides practical knowledge and tools that support continual professional development and stronger financial outcomes across modern livestock operations

LEARNING SESSION 2: Beyond Nutrition Feed Solutions

Ruminant Resilience in Tropical Production Systems

Dr. Pietro Celi
Murdoch University

ABSTRACT

Tropical ruminant production systems face increasing pressure from climate variability, heat stress, fluctuating feed quality, disease challenges, and the need for sustainable productivity gains. These stressors interact to compromise feed intake, metabolic efficiency, animal health, reproduction, and overall farm profitability. Consequently, resilience has emerged as a critical framework for ensuring that ruminants can maintain performance, welfare, and recovery capacity under persistent environmental and biological challenges. This presentation explores an integrated resilience framework for tropical ruminant systems, examining how nutrition, health management, environmental mitigation, and genetic improvement can be combined to enhance animal robustness and long-term productivity. The objective is to identify key biological mechanisms and management strategies that enable animals to better withstand and recover from heat stress, feed variability, and disease pressure. The presentation synthesizes current scientific knowledge and industry practices across four interconnected domains: heat stress adaptation, feed efficiency and digestibility, disease resistance and monitoring, and genetic/genomic selection. Evidence from animal physiology, nutritional science, precision livestock technologies, and emerging genomic approaches is integrated to develop a systems-based understanding of resilience in tropical environments. Heat stress was identified as the primary driver of resilience challenges, affecting gut integrity, glucose metabolism, immune function, and reproductive performance. Improving forage digestibility and nutrient-use efficiency emerged as critical opportunities for enhancing energy availability and sustaining productivity in systems reliant on low-quality forages. Advances in precision monitoring and health surveillance support earlier disease detection and improved recovery, while genomic selection enables resilience traits to become measurable and actionable breeding objectives. Building resilient tropical ruminant production systems requires an integrated approach that combines heat-abatement strategies, precision nutrition, proactive health management, and genomic-assisted breeding.

Keywords: Ruminant resilience; Heat stress; Feed digestibility; Disease resistance; Genomic selection.

LEARNING SESSION 2: Beyond Nutrition Feed Solutions

Management & Feeding Strategies in Modern Tilapia Farming

Dr. Karl Marx Quiazon
Professor

ABSTRACT

Modern tilapia farming requires an integrated production strategy that considers the biological requirements of fish together with the economic conditions of the farms. Profitability depends not only on achieving high growth and survival but also on the proper management of genetics, stocking density, biomass, feed utilization, fish health, water quality, and production costs. This presentation discusses the important management and feeding strategies involved in modern tilapia production, with emphasis on the use of accurate farm data and adaptive decisions to improve biological and economic efficiency.

Biomass management serves as the foundation of an effective feeding program because the amount of feed provided depends on the number and average weight of fish present in the culture system. The presentation explain the importance of selecting an appropriate stocking density based on the carrying capacity of the system and regularly updating biomass estimates according to fish growth, mortality, and harvest adjustments. Feeding strategies are discussed in relation to fish size, feeding rate, feeding frequency, appetite, and prevailing environmental conditions. Particular attention is given to feed conversion ratio (FCR) as an indicator of feed efficiency and production cost. The role of fish genetics is also considered because differences in growth potential, feed conversion, appetite, health, and environmental adaptability can influence the capacity of tilapia to convert feed into harvestable biomass.

The interaction between feeding and water quality is also examined, particularly the effects of feed input and fish metabolism on dissolved oxygen, temperature, pH, ammonia concentration, and overall system carrying capacity. Precision feeding provides a more responsive approach by combining biomass estimates, fish behavior, real-time growth, environmental parameters, and historical FCR with technologies such as automated feeders, sensors, cameras, computer vision, and artificial intelligence. The economic importance of improving FCR is further demonstrated through practical production through practical production calculations and farm-based applications. Overall, the integration of improved genetics, appropriate stocking density, accurate biomass estimation, adaptive feeding, environmental monitoring, and data-based management can reduce feed wastage and production costs while improving growth, profitability, and the sustainability of modern tilapia farming.

Next Generation of Animal Nutrition: Enhancing Feed Value Through Canadian Peas

William W. Riley
Pulse Canada

ABSTRACT

Peas (Pisum sativum L.) can be fed to livestock, aquatic species, and companion animals, usually as whole ground pea meal (PM), but when fractionated into pea protein isolate, pea protein concentrate, pea starch concentrate, or pure pea starch, they can serve additional niche functions. Pea meal (PM) can partially replace corn and soybean meal in livestock rations, with primary benefit coming from its energy content, particularly when fed to swine. Pea protein isolates and concentrates are most often used in food applications, but they are also found in pet foods and treats, aquatic feeds, and some high-value livestock feeds (e.g., swine pre-starters). As well, pea starch concentrate (PSC) has the potential to replace wheat flour (WF) in aquaculture feeds. Recent research in Thailand demonstrated the use of high levels of yellow peas (YP) in laying hen rations. Four isonitrogenous (17.5% CP), isocaloric (2,750 kcal AMEn/kg) diets, that varied in YP inclusion (0%, 8%, 16%, or 24%), were fed to Hisex Brown laying hens for 12 weeks (49-61 weeks of age). YP inclusion at all levels had no significant effect on body weight, egg production, feed intake, or FCR, suggesting that YP can be included at up to 24% in the diet of laying hens without a production penalty. The highest YP inclusion level (24%) resulted in increased yolk weight, while white blood cells and heterophil counts were reduced. In an 8-week feeding trial at the University of the Philippines-Visayas, PSC was used in P. vannemei shrimp diets at WF replacement levels of 25%, 50%, 75%, and 100% (5-20% PSC inclusion). Results showed comparable survival, weight gain, specific growth rate, and feed utilization across treatments. Tissue proximate composition was similar among groups, and PSC had a significantly higher apparent dry matter digestibility coefficient than did WF. Shrimp fed 100% PSC had increased villus height ($P<0.05$) and more slender villi than did control shrimp (0% PSC) ($P<0.05$), suggesting improved intestinal morphology. Serum immune parameters-including prophenoloxidase, lysozyme, and antibacterial activities-were enhanced in shrimp fed PSC at inclusion levels as low as 25% ($P<0.05$), with the most robust responses in the 100% replacement group.

LEARNING SESSION 3: Gut Microbiome Revolution

From Gut Microbiome to Performance: Turning Microbial Insights into Nutritional Solutions in Broiler Production

Jocelyn V. Mariquilla
Cargill Micronutrition and Health Solutions

ABSTRACT

The gastrointestinal microbiome plays a pivotal role in broiler health, growth performance, nutrient utilization, immune competence, and food safety. Recent advances in microbiome intelligence have revealed strong relationships between microbial composition, microbiota maturation, and production efficiency, underscoring the importance of keeping a balanced, stable, and resilient gut ecosystem. Despite these advances, the complexity of the microbial community and the difficulty of translating microbiome data into practical nutritional solutions have limited its widespread commercial application. The development of the broiler gut microbiome is influenced by multiple factors, including feed ingredients, nutrient composition, feed additives, management practices, age, and environmental conditions. These factors shape microbial populations and determine the balance between beneficial fermentative bacteria and potentially harmful enteric pathogens. A healthy microbiome is characterized by appropriate diversity, stability, and resilience, which promotes the production of beneficial microbial metabolites, supports gut integrity and function, limits pathogen proliferation, and enhances overall bird health and growth performance. The emergence of microbiome intelligence, advanced microbial profiling technologies, and data-driven analytical approaches, like Galleon™ now enables the identification of microbial biomarkers associated with health and performance outcomes. Tools like this provide new opportunities to better understand the relationship between nutrition, microbiome development, and productivity. Case studies have demonstrated that targeted nutritional interventions, including postbiotics and phytogenic compounds, and its combination can accelerate microbiome maturation, improve gut health, reduce mortality and enhance growth performance. Collectively, these findings highlight the potential of precision nutrition strategies to optimize microbiome function, improve production efficiency, and support overall broiler health and sustainability in modern broiler production systems.

Bacillus amyloliquefaciens CECT 5940: Unlocking Productivity Through Microbiome Modulation and Gut Health in Poultry

Dr. Balachandar Jayaraman
Evonik Methionine SEA Pte Ltd

ABSTRACT

In monogastric species, extensive recent data demonstrated that probiotics promote gut health by modulating intestinal microbiota, enhancing intestinal morphology and immunity. Bacillus amyloliquefaciens CECT 5940 strain (PRO) is a spore-forming probiotic, with the ability to actively compete with pathogenic bacteria (especially E. coli spp., Salmonella spp., Clostridium spp.) In addition, it produces lactic acid and enzymes that help to improve the intestinal environment and feed digestion. In South Asia, three commercial broiler feeding trials were conducted to evaluate the effects of supplementation of PRO on gut microbiota and performance. In all the trials, two dietary treatments were used as follows: 1. Control (without probiotic; CON) and 2. probiotic PRO. For CON and PRO, birds were housed in trials 1, 2 & 3, which corresponds to 27,000, 24,072 and 15,912, respectively. Broiler supplemented with PRO showed improvement in the final body weight by 70, 34 and 60 g/bird for Trials 1, 2, and 3, respectively, compared to CON. In terms of FCR, BA 5940 supplemented birds showed better performance efficiency in trial 1 (1.59 versus 1.56), 2 (1.59 versus 1.56) and 3 (1.57 versus 1.55) compared to the control. DNA sequencing results indicated that cecal bacterial biomarkers were associated with performance parameters. A total of 61 cecal bacterial biomarkers increased and correlated with positive performance (improved FCR, high final BW and improved percent livability). In addition, 37 bacterial biomarkers correlated to negative performance (high FCR, lower final BW and lower percent livability). PRO significantly modulated 19 key bacterial bio-makers. A very specific modulation of Bacteriodetes and Firmicutes without changing overall abundance is typically a sign of increased growth and body weight. Most PRO bacterial biomarkers are related to livability which indicates that PRO acts as a precision microbiome modulator. In conclusion, Bacillus amyloliquefaciens CECT 5940 supplementation supported gut health, modulated gut microbiota positively, and consequently improved performance in poultry.

LEARNING SESSION 3: Gut Microbiome Revolution

Fueling the Future of Animal Nutrition with Immunopeptides: Enhancing Gut Health, Immunity, and Sustainable Performance

Dr. Concepcion D. Villacorta
Assistant Professor

ABSTRACT

The global animal production industry faces increasing challenges to meet the growing demand for safe, efficient, and sustainable food production while minimizing environmental impact and reducing reliance on antibiotic growth promoters. Immunopeptides, including Surfactin and Citrocin, have emerged as innovative functional feed additives with the potential to support animal health through multiple biological mechanisms. By promoting gut integrity, modulating immune responses, and supporting a balanced intestinal microbiota, immunopeptides may enhance nutrient utilization, resilience to production stress, and overall animal performance. This presentation will explore the scientific basis and practical applications of immunopeptides across diverse animal production systems, including poultry, swine, ruminants, aquaculture, and other livestock species. Current research and emerging field experiences will be discussed to examine their potential roles in supporting growth performance, feed efficiency, gut health, immune competence, and resilience to production challenges, while contributing to responsible antimicrobial stewardship. The presentation will also highlight the potential contribution of immunopeptides to production efficiency, animal welfare, and environmental sustainability through improved nutrient utilization and healthier animals. As animal nutrition continues to evolve toward more resilient and sustainable production systems, immunopeptides represent a promising science-driven nutritional strategy that may help enhance productivity, strengthen animal health, and contribute to a more competitive and sustainable future for the global animal agriculture industry.

LEARNING SESSION 3: Gut Microbiome Revolution

From Gut Microbiota to Host Resilience: Integrating the Gut–Immune Axis for Sustainable Pig Production

Dr. Suparlark Nuntawan Na Ayudhya
Novonesis

ABSTRACT

The gastrointestinal tract is a highly integrated organ that coordinates nutrient utilization, epithelial barrier integrity, mucosal immunity, and the intestinal microbiota. Collectively, these components constitute the gut–immune axis, a dynamic network that maintains intestinal homeostasis and plays a critical role in pig health, growth performance, and disease resilience. Disruption of this balance during weaning, dietary transition, or pathogen challenge can result in microbial dysbiosis, impaired barrier function, excessive immune activation, and reduced production efficiency. Recent advances in microbiome research have demonstrated that bi-directional communication between the intestinal microbiota and the host immune system regulates epithelial integrity, mucosal immunity, and metabolic function through microbial metabolites and immune signaling pathways. These discoveries have transformed our understanding of gut health from a digestive function to a key regulator of systemic health and productivity. Emerging evidence further suggests that microbiota-mediated immune, endocrine, and neural signaling extends beyond the intestine through the microbiota–gut–brain axis, linking gut health with animal resilience and welfare.

LEARNING SESSION 3: Gut Microbiome Revolution

Gut Health Optimalization: The Role of Dairy-Derived Ingredients in Pre- and Post-Weaning Piglet Diets

J. Lemmen[1], L.M. Van Der Woude[1] & I.M. Van As[1]
[1]Nutrifeed Animal Nutrition

ABSTRACT

Weaning is a critical period in a piglet's life, characterized by reduced feed intake, the transition from sow milk to dry feed and an immature digestive system. These challenges can impair nutrient digestion and negatively affect gut health. Therefore, a gradual transition from dairy-based to vegetable protein sources is essential. Dairy ingredients can contribute in multiple ways to a resilient piglet. First, dairy ingredients provide the right nutrients for the young piglet. Their nutrient composition closely resembles sow milk, making them suitable for digestive capabilities and supporting the nutritional transition. However, the nutritional value of dairy ingredients depends on factors such as processing method, protein profile and lactose content. Therefore, careful selection of high-quality dairy ingredients is essential to maximize digestibility and functionality. Second, dairy ingredients support gut health and immune development. Their higher digestibility compared to vegetable protein sources(1) reduces the amount of undigested protein reaching the hindgut, thereby limiting substrate availability for pathogenic bacterial fermentation. Lastly dairy ingredients can improve pig performance. In a post-weaning trial, diets containing dairy protein (WPC-35) resulted in a significantly improved FCR (P=0.02) compared with vegetable protein sources (SPC and potato protein; wheat protein), and a tendency towards a higher ADG (P=0.07). Because adaptation to solid feed starts before weaning, the addition of highly digestible dairy ingredients serves as a nutritional bridge between sow milk and post-weaning diets. The effect of a higher lactose level (3 vs. 9 vs. 15%) in creep feed was compared in a pre-weaning trial, resulting in a significantly higher feed intake (P=0.04), thereby decreasing the demand on the sow. So high-quality dairy ingredients support gut development, enhance nutrient utilization, and improve growth performance during the weaning phase by providing nutrients that match the digestive capacity of the piglet.

BETTER HEALTH | BETTER PERFORMANCE | HIGHER PRODUCTIVITY | BETTER RETURNS

Healthy Animals. Prosperous Farms.

JCS Chemical Industries, Inc.

Your Trusted Partner in Animal Nutrition

Esurfier®

— A new era of emulsifiers

JCS Chemical Industries, Inc.

Powerful Emulsifying Effect

— Unlocking the Nutrient Potential

Esurfier, a biosurfactant-based energy booster, excels at emulsifiying fats and oils, transforming them into fine, stable droplets for better absorption and utilization in animal feeds.

BETTER NUTRIENT ABSORPTION

Particle size reduction increases surface area for improved absorption and utilization.

IMPROVED FAT DIGESTIBILITY

Helps the body efficiently digest and absorb fats and oils.

HIGHER GROWTH PERFORMANCE

More nutrients available for better feed conversion and weight gain.

HEALTHIER ANIMALS

Supports gut health and reduces digestive stress.

Better emulsification. Greater results.

Ideal for:

Swine | Poultry | Aquatic species

Recommended inclusion rate:

0.5 – 1.0 kg per ton of feeds

(depending on species and formulation)

Beijing Enhalor International Tech Co., Ltd.

No.55th Planting Street, Houxian Village South, Houxian Town, Tongzhou District, Beijing, China.

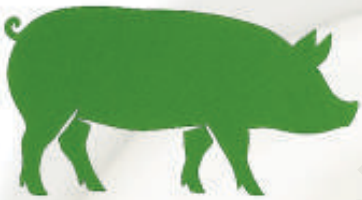
NBG YoguPig

A natural dairy supplement providing highly available energy, probiotics, and vital nutrients designed to improve the performance and immunity of young pigs.



Sow's Milk

Milk is crucial for piglet nutrition, but frequently inadequate in quantity and immune support

Consequences of Low Milk Intake

Greater susceptibility to pathogens

Poorer growth and performance
Increased weaning stress

Benefits

Strong Immunity
Improved Digestion

Compensates for the low availability of maternal milk

Boosts immunity with probiotics

Hydrates easily from powder to highly palatable yoghurt form

Supports a smooth transition to solid feed

ADM

A good start makes all the difference.

The best start for every piglet

A good start in life lays the foundation for healthy piglets that grow efficiently from day one. However, achieving consistent performance can be challenging, as piglets benefit from additional nutritional support before and during weaning. Ensuring that every piglet receives the nutrition it needs is not always easy, particularly in larger litters and during the critical weaning phase.

Dicolac is a premium sow milk replacer that helps bridge this gap. Carefully formulated with high-quality dairy ingredients, highly digestible dairy proteins, and spray-dried encapsulated fat, Dicolac supports piglet vitality, encourages feed intake, and promotes healthy growth. Its nutritionally balanced formulation, including 40% coconut oil, provides a highly digestible source of nutrients that helps piglets perform during early life and make a smooth transition through the weaning period.

We're here to help.

minCo®

Bio-Protective Trace Mineral Complex

- Prevent chemical reaction and oxidation in premix and feed
- Preserve key nutrients and extend shelf-life of premix and feed
- Eliminate risk of heavy metal contamination
- Enable combinations of trace minerals and vitamins
- Substitute both inorganic and organic trace minerals

- Slow release in the intestines
- Prevent erosion of intestinal epithelium
- Minimize wet feces of young chicks and piglets
- Decrease oxidative stress and mortality
- Reduce excretion of trace minerals, support sustainability

Balancius® is a game-changing innovation

Balancing swine performance, profitability and sustainable production, while reducing the need for antibiotics, can be challenging. Now you have Balancius® - a first-of-its-kind enzyme that unlocks the hidden potential of your animals' gastrointestinal functionality.

Balancius® has a unique mode of action that hydrolyses peptidoglycans to break down dead bacterial cell wall debris, optimising nutrient absorption and feed efficiency.

By supporting gastrointestinal functionality in your animals, Balancius® improves feed conversion ratio and weight gain, leading to increased processing yields. With an improvement in swine performance, health and welfare, and a reduction in the environmental footprint, swine producers around the world have increased their profitability by making Balancius® a key component of their feed.

B.I.O.Tox®

Neutralizing Mycotoxins

B.I.O.Tox® is one of the most advanced mycotoxin binders. It reduces the absorption of mycotoxins from the gastrointestinal tract (GIT) and their distribution to blood and target organs by adsorbing the toxins to their surface to form a mycotoxin-binder complexes, which are then excreted in animal faeces.

Unique B.I.O.Tox®

- intensively studied *in vivo* and *in vitro*
- comparatively highest binding efficiency
- no nutrient binding

B.I.O.Tox® makes the decisive difference

PHILSAN 2026
OUTSTANDING ANIMAL NUTRITIONIST AWARDEE

Ameer A. Pahm, DVM, MSc, PhD

For more than three decades of distinguished service, scientific excellence, innovation, and leadership in advancing animal nutrition and the Philippine feed and livestock industries.

Dr. Ameer A. Pahm has built an exceptional career at the intersection of science, innovation, and practical animal nutrition. From his early years as an Animal Nutritionist to his present leadership in Research and Development at San Miguel Foods, his professional journey has been marked by a sustained commitment to transforming scientific knowledge into practical nutritional solutions for animal production.

A veterinarian by training, Dr. Pahm pursued advanced specialization in animal nutrition, earning his Master of Science from the University of the Philippines, with a major in Non-ruminant Nutrition, and later his Doctor of Philosophy from the University of Illinois at Urbana-Champaign, specializing in Poultry and Swine Nutrition, with a minor in Biochemistry and Physiology.

His doctoral research focused on the utilization of amino acids in corn distillers dried grains with solubles by pigs and poultry and the evaluation of DDGS quality through reactive lysine procedures—work that contributed to the scientific understanding of nutrient availability and the effective utilization of alternative feed ingredients.

His scientific contributions extend to numerous studies published in respected international peer-reviewed journals, including Poultry Science, Journal of Animal Science, Journal of Agricultural and Food Chemistry, and Animal Feed Science and Technology. His research has addressed critical areas such as amino acid digestibility, lysine bioavailability, nutrient utilization, and the nutritional evaluation of feed ingredients in pigs and poultry.
His expertise, however, reaches far beyond the laboratory.

Throughout his career at San Miguel Foods, Dr. Pahm has played significant roles in the strategic formulation and development of commercial swine and poultry feeds, application of advanced nutrient formulation systems, evaluation and cost-effective use of feed additives, quality assessment of feed ingredients, and improvement of feed manufacturing and nutritional technologies.

As Assistant Vice President for Research and Development, a position he has held since 2010, he leads a team of scientists responsible for innovations in feed milling processes, feedstuff utilization, and the translation of research breakthroughs from universities around the world into commercial applications.

His contributions have also extended beyond the Philippines. He served as a technical leader in the international expansion of San Miguel Corporation's animal nutrition business in Indonesia and Vietnam, and contributed to the development of pet food products after specialized training in pet food extrusion and formulation at Texas A&M University.

Over the course of his career, Dr. Pahm has combined the rigor of a scientist, the perspective of a veterinarian, the ingenuity of a nutritionist, and the leadership of an industry professional. His work has helped bridge the often-difficult gap between research and application—turning scientific discoveries into nutritional strategies, feed technologies, and commercial solutions that can be used in actual animal production.
More importantly, his career represents the very essence of the animal nutrition profession: using science not merely to understand nutrition, but to make animal production more efficient, productive, and sustainable.

A scientist, innovator, industry leader, and distinguished animal nutritionist whose body of work has contributed significantly to the advancement of animal nutrition in the Philippines.

PAST PRESIDENTS

Dr. Mario M. Labadan	1988-1989; 1989-1990
